Overview

Oil spill accidents have led to great environment destruction and loss for life. According to statistics, there is one spill calamity every four days in China. The government has been improving and implementing regulations and legislations in order to prevent, respond to oil spills and restore environment impacts. It is also investing to build dozens of oil spill response centers before 2015. Chinese businesses are also required to establish spill response mechanism. Take CNOOC for an example, it will expand and build seven spill response bases in coming years, which will acquire five to 10 support vessels and other spill response equipments.

The 2nd Oil Spill Response Workshop (OSRW 2012) will provide venues for experts from around the world to share their latest researches, technologies and concepts in spill prevention, preparedness, response, and restoration. It is an opportunity for the industry to come forward and discuss oil spill - how it can be prevented, what can be done to clean up the menace and how we can utilize the best technology.

OSRW 2012 will address the following issues

- ★ Spill response and restoration new technologies and application
- ★ Regulation, legislation and insurance
- ★ Spill prevention and response for vessels and ports
- ★ Spill prevention and response in oil exploration and production in offshore and subsea
- ★ Spill monitor and test
- ★ Hazardous chemicals spill response

Why to attend OSRW 2012?

- ★ Follow up with the up-to-date technologies
- ★ Grasp the industry policy and regulation
- ★ Gain an insight of development trend
- ★ Network with oil spill experts

Why to attend OSRW 2012

- ☆ Follow up with the up-to-date technologies
- ☆ Grasp the industry policy and regulation
- ☆ Gain an insight of development trend
- ☆ Network with oil spill experts
